HYDRAULIC PLUNGER ELEVATOR.

## Hydraulic Plunger Elevator.

The cut shows our Direct Plunger Hydraulic Elevator for passenger and freight service, of which we have large numbers in use.

This, as the cut shows, is a very simple construction, having the fewest working parts of any elevator yet designed. It is the safest elevator possible to make, the load being always supported on a solid column of water. It is physically impossible for it to fall.

In price it is usually less than any other kind of hydraulic lift; in some cases not over one-half.

For one or two story lifts it has no competitor.

# THE DEAN-WHITING ELEVATOR CO.

Does a General Elevator Business.

It is prepared to furnish

CABLE HYDRAULIC ELEVATORS,

DIRECT PLUNGER HYDRAULIC,

TELESCOPE HYDRAULIC,

BELT POWER SPUR GEARED,

HYDRAULIC CABLE ELEVATOR.

CUT NO. I.

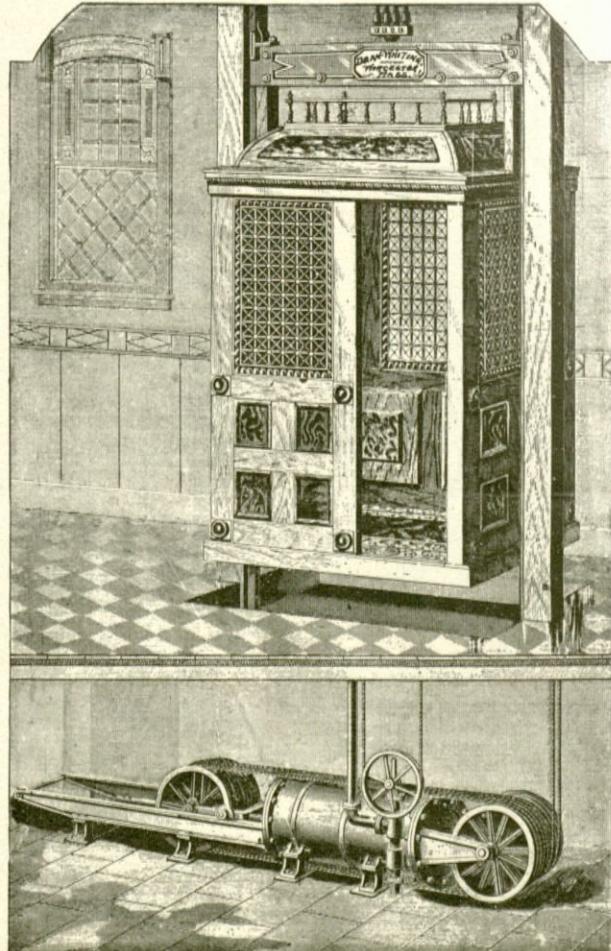

# Dean-Whiting Elevator Co.

WORCESTER, MASS.

PASSENGER CAR ADAPTED TO OUR CABLE HYDRAULIC ELEVATOR.

CUT NO. 2.

CABLE HYDRAULIC ENGINE, SHOWING PASSENGER CAR CONNECTED.

## Hydraulic Cable Elevator.

The accompanying cut shows our Hydraulic Cable Elevators, as built for passenger and freight service.

These machines are the result of many years' experience in this class of work, and are the embodiment of all that is latest and best in Hydraulic Elevator practice. The Hydraulic engine shown in the cut, in the basement directly under the car, is preferably so located in practice, but may be set in almost any position in the building to accommodate the circumstances, either hung from the ceiling or fastened to the floor.

They are adapted for either one, two or three separate and independent cables, which are so connected to the car that the failure of any one of them will at once stop the car in its descent and also stop the machine, thus keeping the other cables tight and holding the car safely until repairs can be made.

This Machine stands at the head for efficiency, economy and adaptability to position and pressure of water, and also for safety and durability.
